CHIEDOZIE ONYEKWUM

+1 (516) 870-2413 | chiedozieonyekwum@outlook.com | LinkedIn | GitHub | Portfolio: dozman99.github.io

SUMMARY

Dedicated DevOps/MLOps engineer with expertise in cloud infrastructure, cybersecurity, and AI. Proven track record deploying secure, scalable systems across AWS and Azure. Pursuing an M.Sc. in Computer Science at Texas A&M, researching federated learning, machine unlearning, and autonomous systems. Focused on applying the right AI solution with disciplined attention to privacy, observability, and responsible deployment at scale.

CERTIFICATIONS

Azure DevOps Engineer Expert | Azure Administrator | AWS Certified Cloud Practitioner | PagerDuty Certified Incident Responder | Azure Fundamentals

TECHNICAL SKILLS

Languages: Go, Python, Bash, PowerShell, JavaScript, TypeScript
Containers & Virtualization: Docker, Kubernetes, Firecracker
IaC & CI/CD: Terraform, Pulumi, Terragrunt, Spacelift, Azure DevOps, GitHub Actions, CircleCI, Helm
Monitoring & ITSM: Prometheus, ELK Stack, Datadog, Fluent-bit, Jira, ServiceNow, PagerDuty
AI/ML & Web: Kubeflow, MLflow, Azure Databricks, LangChain, YOLOv8, LaneNet, Nginx

WORK EXPERIENCE

Samsung Austin Semiconductor *Austin, Texas, USA*
AI/ML Engineer Intern May 2026 – Aug 2026

- Built an AI-driven opt-out detection feature that interprets free-form employee replies to incident alerts and automatically updates ban records, paired with alert-suppression and rate-limiting logic that reduced non-actionable incident alerts.
- Designed and built a full-stack ban/alerting portal (React, TypeScript, FastAPI, PostgreSQL) with SAML/SSO for employee onsite workforce; built a custom PowerShell CI/CD pipeline to deploy it in a secured, air-gapped environment, replacing a fully manual process with self-service access and full audit logging.

Texas A&M University *Texas, USA*
Research Assistant Mar 2025 – Dec 2025

- Conducted research and implemented solutions in machine unlearning, focusing on security, privacy, and broader AI applications.
- Researched PKI and Blockchain solutions to decentralize Certificate Authorities, improving security and high availability.
- Developed a proof-of-concept autonomous vehicle integrating RGB-LiDAR, Intel RealSense depth camera, GPS, and IMU on NVIDIA Jetson (Orin/Xavier); deployed YOLOv8 and LaneNet for real-time navigation.

Conclase *Colorado, USA*
DevOps Engineer Aug 2022 – Jan 2025

- Served as outsourced infrastructure engineer across healthcare and fintech client partnerships, owning end-to-end AWS infrastructure including ECS, EC2, CloudFormation, ALB, Route 53, S3, RDS, and CodePipeline/CodeBuild across multiple client environments.
- Architected a Feature Branch Testing (FBT) system using Terraform and AWS enabling developers to spin up fully isolated, disposable per-branch environments - significantly increasing testing frequency and reducing integration risk across client projects.
- Built a full environment replication pipeline (local - FBT - Dev - Staging - Prod) with full infrastructure parity, automated stage promotion, reusable Terraform modules, and per-environment secrets and config management.
- Hardened client infrastructure via CIS Benchmark adoption, automated certificate regeneration, AWS Firewall Manager consolidation, and rootless Docker runners; deployed secure SFTP server enabling encrypted B2B data exchange in regulated environments.
- Participated in 24/7 on-call rotation with defined SLA response windows, managing P1/P2 incidents via ServiceNow and PagerDuty across healthcare and fintech client infrastructure.
- Contributed to monolith-to-microservices migrations across client projects, reforming deployment strategies as application processes evolved - managing ECS service decomposition, ALB routing, blue/green and rolling deployments, and observability frameworks that maintained client SLOs and reduced disaster recovery time by 40% across full lifecycle stages.
- Automated Azure VM image pipeline that ingested on-premises build artifacts, triggered first-logon software provisioning scripts, and published versioned images to Azure Shared Image Gallery - giving internal teams ready-to-use environments instantly and eliminating manual copy overhead.

Gwrite *Port Harcourt, Nigeria*
DevOps Engineer Nov 2020 – Aug 2022

- Implemented HashiCorp Vault for Kubernetes secrets management and led SAP migration to Azure, achieving 70% RTO reduction.
- Architected secure containerization using Docker and CVSS tooling; transformed CI/CD processes with Tekton pipelines on Kubernetes.
- Pioneered AKS cluster setup following best practices and designed cost-optimised AWS infrastructure leveraging EC2, S3, RDS, and networking services.

Parkway Projects Africa *Lagos, Nigeria*

Implementation Engineer Sep 2019 – Mar 2020

- Developed serverless solutions on Azure/AWS with API and webhook integrations; managed cloud software incidents via ServiceNow.
- Built Django-based IT asset management application with real-time tracking; led network security implementation including VPN and ExpressRoute configurations.

PROJECTS & CONTRACTS

- **DozLab**: Cloud-native Kubernetes SaaS platform for DevOps/cybersecurity education; microservice architecture with sidecar containers, VM-based hands-on labs, and real-time WebSocket proxying. [GitHub]
- ECO-T (EDAT): Full-stack GHG accounting platform - see Leadership section for full detail.
- Sherloc: AI-powered Root Cause Analysis platform enhancing team collaboration and incident communication.
- ML Infrastructure: Optimised Kubernetes-based ML workflows using Kubeflow for pipeline orchestration and reproducibility.

LEADERSHIP

EDAT – VA (Independent Sustainability Assurance) *USA (Remote)*

VP of Engineering (Volunteer) Apr 2025 – Present

- Lead engineering team structure, recruitment, and technical direction for a sustainability assurance platform specializing in ESG verification, GHG validation, and voluntary carbon market auditing.
- Architected and built ECO-T - a full-stack GHG accounting platform covering Scope 1/2/3 emissions, API integrations with EPA, ERP systems, and energy grids, carbon pricing & offsets, and Sankey diagram production.
- Designed AI/ML pipelines for automated ESG verification and carbon disclosure across GRI, TCFD, CSRD, ISO 14064, VCS, and Gold Standard frameworks.
- Built backend APIs and DevOps/cloud infrastructure supporting GHG reporting automation, voluntary carbon market assurance, and third-party audit workflows.

National Society of Black Engineers, Texas A&M *Texas, USA*

Vice President Jan 2025 – Present

- Facilitate career development and cross-disciplinary collaboration through targeted projects that expand members' competitive edge and professional opportunities.

Microsoft *DC, USA*

Student Ambassador Jan 2018 – Nov 2021

- Mentored students in software development; developed school data analytics tools with Azure integration and organised community tech events.

EDUCATION

Texas A&M University - M.Sc., Computer Science

GPA: 3.85 | Expected Dec 2026

University of Port-Harcourt - B.Eng., Mechanical Engineering
